ABOUT MYSELF

I've been into programming since school, my first programming languages were Pascal, QBasic and then Delphi. Later at the institute, I programmed in C, C++ and PHP. After university, I started my career as a 1C developer. 1C software products were gaining popularity in Russia. After 6 years, I grew from a junior 1C developer to the head of a 1C development group. In parallel, I started learning other programming languages such as JavaScript and Python to expand my technology stack, so I got into Yandex-Practicum and completed two courses on front-end (JS) development and back-end (python) development for 10 months each. Already in the process of learning, it was possible to apply knowledge in commercial projects. The modern technology stack turned out to be more interesting and promising for me than 1C, and I decided to completely change the technology stack and become a full-stack developer.

PROJECTS

Service for money transfer to cards (commercial project) — *API service (python + Django Rest Framework)*

The application allows the internal accounting system or CRM system to interact with banks or fintechs and send money to suppliers' and clients' cards.

As a result of the service implementation, 1 out of every 4 customers receives card payments which allows to decrease the cash collection and transportation costs.

News Explorer (study project) *(JS + html/css + node.js + express.js + MongoDB)*

A project to search for news on various news portals using the API, the project also includes a personal account with the ability to save and delete your favorite news.

Mesto (study project) *(JS + html/css + node.js + express.js + MongoDB)*

Mini social network with the ability to add photos, delete photos (only your own), leave likes for your favorite photos.

Telegram bot for monitoring system status (commercial project) *(python).*

As a result of the service implementation, fault tolerance has significantly increased and downtime has been reduced

Gruzolov (commercial project) — *Telegram bot (python)*

An application for river transporters search.

Talk-ed.com (commercial project) — Start-up at the initial stage *(ReactJS + HTML/CSS + python + Django)*

In collaboration with the Ural School of Negotiations, a portal uniting all schools of negotiations in Russia and abroad and helping to search for a duel opponent and a coach for review is being developed.

Goodlombard.ru (commercial project) — (My part is API service in JavaScript and also some promo pages) Web-site development for a chain of pawnshops incl. Web-site, Mobile app, API for interaction with the internal accounting system and external services. Currently, about 30% of customers use services developed for payments in their web-site accounts or in the mobile application which allowed to reduce staff load and avoid queues.

Trade (commercial project) — Development of software (accounting and analytics) for metal trade from scratch. (1C:Enterprise)

The company has been using the software for 7 years for operational analytical data receipt and decision making.

SKILLS

Python

Django

JavaScript

React

HTML / CSS

Django REST Framework
